

DevOps Engineer

We are looking for a Software Engineer to integrate and automate systems within the ITIL framework.

YOUR PROFILE

Requirements

- experience with integrating a variety of services as a member of a collaborative team and have no fear digging into the unknown
- at least 2 years of NOC and/or DevOps experience
- working knowledge of Nodejs and Javascript
- understanding software development (Java, JavaScript, HTML, and CSS etc.)
- strong Linux/Unix administration skills
- experience with container technologies (Docker, Kubernetes)
- knowledge of Systems and Network Infrastructure and experience troubleshooting problems
- familiarity in monitoring tools such as Zabbix, Grafana. Familiarity with Jira, Bitbucket, and Confluence
- scripting languages and IaC tool (JavaScript, Bash, PowerShell, Terraform, Ansible)
- experience with OS-level network configuration and troubleshooting on Linux and Windows
- working knowledge of the web applications, networks, protocols, and infrastructure hardware
- familiarity with developing Infrastructure as Code (IAC) pipelines
- experience dealing with technical end-users in a support role
- experience with Change Management and Change Control
- experience working with version control systems (SVN, GitLab, building and maintaining CI/CD processes)
- ability to communicate clearly and have strong, positive interpersonal skills
- comfortable presenting to a group including management
- understanding of OOP
- ability and interest to learn a new programming language
- ability to review the technical documentation provided by others and provide constructive comments
- excellent written communication skills in English
- public cloud infrastructure (Azure, AWS and VMWare) is a plus
- experience with web services via APIs is a plus

What you will do

- you will build solutions that enable your colleagues to efficiently and effectively get stuff done
- work on a plethora of issues, a great day for you would involve proposing solutions based on customer feedback, folding in opportunity to design and develop an engaging solution
- you may work with technologies related to telXira API's, highly availability, scalability, AWS; VMWare the list is only limited by your urge to grab additional knowledge
- you will dive into new technologies frequently and expect to only develop on the leading edge with top notch services, API's and integration best practices
- contribute to internal frontend libraries and frameworks
- help resolve technical issues and blockers for internal customers
- build integrations between various systems, leveraging their APIs

WHAT YOU WILL FIND WITH US

Work
